Q27 Guidance

The **average** is calculated by adding up the number of days each participant stayed in the program and dividing by the total number of program participants.

The **median** is the value of the number of days of the quantity lying at the midpoint of a frequency distribution, such that there is equal probability of falling above or below it.

Example 1: The median for this list is 50.

| Client Number | Number of days on the program |
|---------------|-------------------------------|
| 1 | 60 |
| 2 | 50 |
| 3 | 40 |

Example 2: The median for this list is 45. You must add 40+50 and divide by 2 since there is an even number of clients.

| Client Number | Number of days on the program |
|---------------|-------------------------------|
| 1 | 60 |
| 2 | 50 |
| 3 | 40 |
| 4 | 30 |
